

**PROFESSIONAL SUMMARY:**

- Senior Java Full Stack Engineer with 8 years of experience designing, developing, and supporting enterprise-scale applications across financial services and business-critical platforms.
- Strong expertise in Java and Spring-based backend development, building reliable services with a focus on clean code, modular architecture, maintainability, and performance optimization.
- Extensive experience developing modern, responsive user interfaces using React and Angular, ensuring seamless integration with backend systems and a consistent user experience.
- Proven ability to own features end to end, from requirement analysis and design through implementation, testing, deployment, and production support.
- Hands-on experience with relational and NoSQL databases, including schema design, query optimization, and performance tuning for high-volume applications.
- Proficient in cloud-based deployments and CI/CD pipelines, supporting automated builds, testing, and releases in containerized environments.
- Strong background in writing unit and integration tests, following best practices to improve code quality and reduce regression issues.
- Experienced in production support and troubleshooting, including log analysis, performance monitoring, and root-cause analysis in live environments.
- Experience mentoring junior engineers, guiding design decisions, and ensuring delivery quality within Agile teams.
- Strong focus on building secure and reliable systems in regulated banking and financial services environments.
- Effective collaborator within cross-functional Agile teams, working closely with product owners, QA, and operations teams to deliver high-quality solutions.
- Known for a problem-solving mindset and continuous improvement, contributing to system stability, scalability, and long-term maintainability.

TECHNICAL SKILLS:

Programming Skills	Java, JavaScript, TypeScript
Frontend Technologies & State Management	React.js, Redux, HTML5, CSS3, BootStrap, next.js
Backend Development (Java, Security & ORM)	Spring, Spring Boot, Spring MVC, Spring Web Flux, JDBC, Servlets, JSP, Hibernate, Spring Data JPA, Spring Security, OAuth2, JWT
Microservices & Architecture	Microservices Architecture, Event-Driven Architecture, RESTful API's, JSON
Databases	Oracle, MySQL, SQL Server, PostgreSQL, MongoDB, Cassandra
Testing Frameworks	JUnit, Mockito, Jest, Test Automation, Integration Testing
Cloud & Devops	AWS (Certified Solutions Architect – Associate), Azure, Docker, Kubernetes, Jenkins
Development Practices	Agile, Scrum, CI/CD, TDD, Design Patterns

PROFESSIONAL EXPERIENCE:

First Citizens Bank, Los Angeles, CA

Dec 2023 – present

Role: Sr. Software Developer

- Developed secure, responsive user interfaces using React and TypeScript for internal banking dashboards and customer-facing workflows, ensuring usability and accessibility.
- Implemented Redux and Context API for predictable state management, improving stability and maintainability of data-intensive financial screens.
- Integrated frontend components with backend services to display transaction status, account data, and audit information accurately and in a timely manner.
- Collaborated with UX, backend, and QA teams to ensure secure data handling, validations, and smooth end-to-end user flows in regulated environments.
- Designed and implemented Java and Spring Boot services to support core banking workflows, including transaction processing and business rule enforcement.
- Optimized backend APIs by improving query efficiency and request handling, reducing response latency and supporting higher transaction throughput.
- Implemented concurrency-safe and fault-tolerant backend logic to ensure reliability and consistency of financial operations.
- Designed and maintained relational and NoSQL data models to support transactional data, audit records, and reporting needs.
- Built secure RESTful APIs using Spring Boot, Spring Data JPA, and Hibernate, ensuring validation, error handling, logging, and audit traceability.
- Used Apache Kafka to support asynchronous processing and event-driven communication for transaction and audit-related workflows.
- Implemented authentication and authorization using Spring Security and OAuth2, enforcing role-based access control.
- Enhanced automated testing and CI/CD pipelines, reducing manual deployment effort and improving release turnaround time for production services.
- Provided technical guidance through code reviews and design discussions, contributing to system reliability and maintainable solutions.

Volkswagen, Rochester, Michigan

Feb 2022 - Nov 2023

Role: Software Developer

- Analyzed requirements and designed user-facing features and workflows, delivering frontend solutions aligned with security, reliability, and operational standards.
- Built responsive, high-performance interfaces using Angular for internal enterprise platforms supporting engineering, operations, and business teams.
- Designed and maintained component-driven Angular architecture, creating reusable components, shared modules, and UI patterns to support scalable development.
- Implemented state and data management using Angular services and RxJS, handling complex, multi-source data flows for data-intensive applications.
- Optimized frontend performance using OnPush change detection, efficient lifecycle management, lazy-loaded modules, and route-based code splitting to improve load time and runtime efficiency.
- Developed form-heavy, workflow-driven UIs using Angular Reactive Forms, implementing validation, conditional rendering, and robust error handling.

- Ensured accessibility-compliant UI development, following enterprise accessibility standards and usability best practices.
- Integrated Angular applications with backend services using REST APIs, supporting real-time and asynchronous workflows with graceful failure handling.
- Developed supporting Java and Spring Boot services, focusing on API design, data aggregation, and efficient payload delivery to enable frontend functionality.
- Deployed applications in cloud-based environments, supporting scalable and reliable deployments across development, test, and production stages.
- Containerized applications using Docker, ensuring consistent runtime behavior and operational readiness in cloud environments.
- Engineered automated test scripts for frontend and backend components to support test automation and improve release confidence.
- Owned user stories end to end in Agile (two-week sprints), resolving production issues and applying engineering principles to improve application reliability.

American Eagle Outfitters, Pittsburgh, PA

Jan 2020 - Feb 2022

Role: Software Developer

- Designed and implemented scalable Java Spring Boot microservices to support product catalog, pricing, promotions, and inventory availability.
- Built responsive, component-driven UIs to enhance product discovery, cart flows, and checkout experiences, improving page load performance and customer engagement metrics.
- Integrated real-time inventory and order management systems (OMS) to ensure accurate stock visibility across online and in-store fulfillment channels.
- Optimized backend APIs and database queries to reduce latency and support high-concurrency traffic, improving system responsiveness during flash sales.
- Collaborated closely with product managers, UX designers, and QA teams to translate merchandising and marketing requirements into reliable, production-ready features.
- Implemented robust error handling, logging, and monitoring to proactively identify and resolve production issues in a fast-paced retail environment.
- Supported A/B testing and feature toggles to enable data-driven experimentation on customer journeys without impacting platform stability.
- Contributed to CI/CD pipelines and deployment automation, accelerating release cycles while maintaining compliance with enterprise security and quality standards.
- Played a key role in modernizing legacy retail services, improving maintainability and enabling faster onboarding of new features aligned with evolving business needs.

Iprism Technologies, Hyderabad, India

July 2018 - Dec 2019

Role: Software Developer

- Assisted in developing Java-based backend components under senior guidance, contributing to core business logic and data processing modules.
- Supported frontend development using HTML, CSS, and JavaScript, helping build basic user interfaces and improve page responsiveness.
- Worked with JDBC and SQL queries to retrieve and update data from relational databases as part of application functionality.

- Participated in building and testing simple REST endpoints, gaining exposure to backend-to-frontend communication.
- Wrote unit test cases using JUnit to validate application functionality and reduce basic defects during development.
- Helped debug and fixed issues identified during development and testing, improving understanding of application flow and error handling.
- Used Git for version control, learning branching, committing, and collaboration workflows within a development team.
- Participated in Agile meetings and code reviews, gaining exposure to software development best practices and team collaboration.

EDUCATION:

Master's in computer science – University of Houston-Clear Lake

bachelor's in computer science – Kakatiya Institute of Technology & Science.
